DIRECTIONS FOR USE

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as barrier laminate or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or viton
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box only apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Turf and Landscape Uses: Do not enter or allow others to enter treated area until sprays have dried.

DISEASE CONTROL IN GOLF COURSE TURF

TURF USE RESTRICTIONS AND PRECAUTIONS

For use on golf course turf only.

Do not use on home lawns and turf sites associated with apartment buildings, daycare centers, playgrounds, playfields, recreational park athletic fields, athletic fields located on or next to schools (i.e., elementary, middle and high school), campgrounds, churches, and theme parks.

Not for homeowner use.

Not for use on turf being grown for sale or commercial use as sod.

Do not use clippings for animal feed.

Do not exceed 3.6 fl.oz. of Tebuconazole 3.6F Fungicide per 1,000 sq ft per year.

Do not apply more than 6 applications per year.

General Information

For use on all Golf turf applications of cool season and warm season grasses (such as Bentgrasses, Bluegrasses, Fescues, Ryegrasses, St. Augustine grasses, and Zoysia) or their mixtures. Tebuconazole 3.6F is not phytotoxic to any of the above mentioned grasses when used in accordance with the label.

Note: Bermudagrass can be sensitive to Tebuconazole 3.6F under certain conditions. Do not apply consecutive applications during or just after dormancy break. Avoid applications when temperatures are expected to exceed 85 degrees F.

Tebuconazole 3.6F can be used for the prevention and control of the diseases mentioned in table below. Begin applications when conditions favor disease development and repeat applications as long as these conditions persist. Preventative treatments can be applied using 28 day intervals as indicated. When treating golf greens, always treat aprons and approaches. Spray uniformly over the area to be treated with properly calibrated equipment.

Apply the specified amount of Tebuconazole 3.6F Fungicide in sufficient water for thorough coverage. A volume of 66 – 132 gallons per acre (1.5 – 3.0 gallons per 1,000 sq ft) is recommended. Apply using properly calibrated low volume, hand held, mechanical or motorized ground broadcast equipment. Application to small areas may be made with low-pressure handwand or backpack equipment. Maintain constant agitation during application.

Depending on the disease, Tebuconazole 3.6F should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results use spray mixture the same day it is prepared.

The amount of water is dependent on the depth of the root zone. For prevention, begin applications two or four weeks prior to the historical appearance of disease symptoms. Initiate cultural control practices at the same time the fungicide is applied. Refer to your local County Extension Service for this information. Apply subsequent applications at 28 day intervals.
Take All Patch (<i>Gaeumannomyces graminis</i>)	0.6	For prevention, apply in the fall when soil temperature reaches 55-65° F and again in the spring under similar soil temperature conditions. DISEASE CONTROL IN FIELD, NURSERY AND CONTAINER ORNAMENTALS AND COMMERCIAL and RESIDENTIAL LANDSCAPES

ORNAMENTAL USE RESTRICTIONS AND PRECAUTIONS

For use on ornamental plants only; not for woodlands or forest management.

Not for homeowner use.

Do not apply more than 30 fl oz per acre is a single application.

Do not apply more than 0.94 gallons (120 fl oz) of Tebuconazole 3.6F (equal to 3.38 lbs of Tebuconazole) per acre per year.

Do not make more than 4 applications per year at highest rate.

Do not apply to bearing fruit trees or vegetables

Tebuconazole 3.6F can be used in a preventative and curative disease control program for the listed plant types and disease in the table below. Optimum disease management is obtained when Tebuconazole 3.6 F is used in conjunction with sound disease management practices.

Apply material with properly calibrated hand held, mechanical or motorized spray equipment. Begin applications when disease first appears and repeat at 14-21 day intervals during the growing season. Use the shortest interval when conditions are unusually favorable for the development of disease. For hand held, mechanical, or motorized applications, mix as directed below and apply as a full coverage spray to drip for the prevention and control of the diseases listed below. Choose a finished spray volume appropriate for the size of the plants and amount of foliage, which will provide thorough coverage throughout the canopy. Allow sprays to dry before overhead irrigation is applied.

Apply Tebuconazole 3.6F at rates of 4-10 fl oz per acre in 100 gallons of water. Spray volume may range from 50 up to 300 gallons of finished spray per acre depending upon equipment, plant species and plant growth stage at time of application.

Note: The "Directions for Use" of this product reflect the cumulative inputs from both historical field use and product testing programs. However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site with a listed disease problem. Wait 5-7 days after treatment to evaluate results. This product is not recommended for use on African Violets, Begonias, Boston Fern, and Geraniums.

RE: EPA Reg. No. 82542-27

Robert Hawk to: Tracy Keigwin, Mary Waller

Dear Tracy,

Thank you for sending a PDF of the letter. I believe that the problem can be solved immediately.

Mary, please understand that neither Cerexagri nor Gustafson exist today. Bayer acquired Gustafson in 2004 and United Phosphorus acquired Cerexagri in 2006. Source Dynamics did make offers to pay both Bayer and United Phosphorus.

Similarly, EPA on March 9, 2010 transferred Punjab's tebuconazole registrations and data to Repar Corporation. To quote the transfer letter: "The Agency acknowledges it has received a request for data transfer dated February 24, 2010 to transfer data ownership from the transferor to the transferee. The data transfer is effective the date of this letter. After this date Repar Corporation will be considered the data owner. This action will not automatically reflect on the Data Submitters List." Source Dynamics did submit an offer to pay to the current data owner, Repar.

In summary, Source Dynamics has fulfilled its OTP obligations. We look forward to immediate approval of the proposed amendment.

Regards.

Bob

Hi Bob,

Unfortunately you still have a few deficiencies with this action that must be resolved before we can move forward. The paper copy is in the mail, but I wanted to PDF our letter to you as well since sometimes the mail can take awhile.

CAUTION

Harmful if swallowed, inhaled or absorbed through skin. Avoid contact with skin, eyes, and clothing. Avoid breathing vapor or spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves, such as barrier laminate, or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or Viton
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground-water contamination.

Surface Water Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after

application. Poorly draining soils and soils with shallow water tables are more prone to runoff that contains this product. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as barrier laminate or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or viton
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box only apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Turf and Landscape Uses: Keep children and pets out of treated areas until sprays have dried.

GENERAL INFORMATION

Read the entire Directions for Use and Conditions of Sale before using this product.

Chemigation: Do not apply this product through any type of irrigation system.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES

- Do not apply within 100 feet of aquatic areas listed above.
- Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetation filter strip.
- See Spray Drift Management section for further information.

Spray Drift Management

Make ground application when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.

Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperatures.

Do not make ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground.

Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

Spray Volume: For best results Tebuconazole 3.6F Fungicide may be applied in 66-132 gallons of water per acre for turf using ground based equipment. For ornamentals, 50-300 gallons of finished spray per acre are recommended depending upon equipment, plant species and plant growth stage at time of application. For the most effective results, equipment calibration should be checked regularly. When using lower spray volumes, be sure to maintain uniform application and full crop coverage so as to ensure effective control. Increase spray volume to ensure proper application, if required.

Compatibility Test for Mix Components:

Before mixing components, always perform a compatibility jar test. For 66 gallons per acre spray volume, use 5 cups of water in a clear, clean mixing jar. For other spray volumes adjust accordingly. Only use water from the intended source at the source temperature. Add components in the sequence indicated below in Mixing Order using 3 teaspoons for each pound of dry product or 1½ teaspoon for each pint of liquid product of recommended label rate per acre. Always cap the jar and invert 10 cycles between

component additions. When the components have all been added to the jar and fully mixed, let the solution stand for 15 minutes. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clabbered) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent and use the compatibility agent as directed on its label.

Mixing: Continuous agitation is required during mixing. When mixing this product and water, use the specified application rates as listed for each crop on this label. Before combining any other substances with the mixture, ensure that the Tebuconazole 3.6F is completely dispersed in the mixture.

Recommended Mixing Procedure:

1. Water. Add three-quarters of the required volume to a thoroughly clean sprayer tank.
2. Agitation. Start agitation and maintain constant agitation throughout mixing and application.
3. Inductor. If an inductor is used, rinse it thoroughly after each component has been added.
4. Products in PVA Bags. Place any product contained in water soluble PVA bags into the mixing tank. Wait until all water soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
5. Water Dispersible Products. Including dry flowables (DF), wettable powders (WP), suspension concentrates (SC) or suspo-emulsions (SE).
6. Water-soluble products.
7. Emulsifiable concentrates (such as oil concentrates when applicable).
8. Water soluble additives (such as AMS or UAN when applicable).
9. Remaining quantity of water.

Resistance Management Information

The active ingredient in Tebuconazole 3.6F is a member of the DMI (Demethylation Inhibitor) fungicide group (FRAC grouping 3) and exhibits no known cross-resistance to products with the same mode of action when used repeatedly in the same location or in successive years as the primary method of control for targeted diseases. Because the speed and scope of resistant population development can not be predicted, the use of this product should conform to resistance management strategies established for the crop and use area. Such strategies may include the rotation and/or tank mixing with products utilizing different modes of action or limiting the number of applications per season. Contact your local university or extension specialist and/or manufacturer for fungicide resistance management recommendations.

DISEASE CONTROL IN GOLF COURSE TURF

TURF USE RESTRICTIONS AND PRECAUTIONS

For use on golf course turf only.

Do not use on home lawns and turf sites associated with apartment buildings, daycare centers, playgrounds, playfields, recreational park athletic fields, athletic fields located on

or next to schools (i.e., elementary, middle and high school), campgrounds, churches, and theme parks.

Not for homeowner use.

Not for use on turf being grown for sale or commercial use as sod.

Do not use clippings for animal feed.

Do not exceed 3.6 fl.oz. of Tebuconazole 3.6F Fungicide per 1,000 sq ft per year.

Do not apply more than 6 applications per year.

General Information

For use on all Golf turf applications of cool season and warm season grasses (such as Bentgrasses, Bluegrasses, Fescues, Ryegrasses, St. Augustine grasses, and Zoysia) or their mixtures. Tebuconazole 3.6F is not phytotoxic to any of the above mentioned grasses when used in accordance with the label.

Note: Bermudagrass can be sensitive to Tebuconazole 3.6F under certain conditions. Do not apply consecutive applications during or just after dormancy break. Avoid applications when temperatures are expected to exceed 85 degrees F.

Tebuconazole 3.6F can be used for the prevention and control of the diseases mentioned in table below. Begin applications when conditions favor disease development and repeat applications as long as these conditions persist. Preventative treatments can be applied using 28 day intervals as indicated. When treating golf greens, always treat aprons and approaches. Spray uniformly over the area to be treated with properly calibrated equipment.

Apply the specified amount of Tebuconazole 3.6F Fungicide in sufficient water for thorough coverage. A volume of 66 – 132 gallons per acre (1.5 – 3.0 gallons per 1,000 sq ft) is recommended. Apply using properly calibrated low volume, hand held, mechanical or motorized ground broadcast equipment. Application to small areas may be made with low-pressure handwand or backpack equipment. Maintain constant agitation during application.

Depending on the disease, Tebuconazole 3.6F should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results use spray mixture the same day it is prepared.

DISEASE CONTROL IN FIELD, NURSERY AND CONTAINER ORNAMENTALS AND COMMERCIAL and RESIDENTIAL LANDSCAPES

ORNAMENTAL USE RESTRICTIONS AND PRECAUTIONS

For use on ornamental plants only; not for woodlands or forest management.

Not for homeowner use.

Do not apply more than 30 fl oz per acre is a single application.

Do not apply more than 0.94 gallons (120 fl oz) of Tebuconazole 3.6F (equal to 3.38 lbs of Tebuconazole) per acre per year.

Do not make more than 4 applications per year at highest rate.

Do not apply to bearing fruit trees or vegetables

Tebuconazole 3.6F can be used in a preventative and curative disease control program for the listed plant types and disease in the table below. Optimum disease management is obtained when Tebuconazole 3.6 F is used in conjunction with sound disease management practices.

Apply material with properly calibrated hand held, mechanical or motorized spray equipment. Begin applications when disease first appears and repeat at 14-21 day intervals during the growing season. Use the shortest interval when conditions are unusually favorable for the development of disease. For hand held, mechanical, or motorized applications, mix as directed below and apply as a full coverage spray to drip for the prevention and control of the diseases listed below. Choose a finished spray volume appropriate for the size of the plants and amount of foliage, which will provide thorough coverage throughout the canopy. Allow sprays to dry before overhead irrigation is applied.

Apply Tebuconazole 3.6F at rates of 4-10 fl oz per acre in 100 gallons of water. Spray volume may range from 50 up to 300 gallons of finished spray per acre depending upon equipment, plant species and plant growth stage at time of application.

Note: The "Directions for Use" of this product reflect the cumulative inputs from both historical field use and product testing programs. However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site with a listed disease problem. Wait 5-7 days after treatment to evaluate results. This product is not recommended for use on African Violets, Begonias, Boston Fern, and Geraniums.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry place and in such a manner as to prevent cross-contamination with other pesticides, fertilizers, food and feed. Store in original container and out of the reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. If container is leaking, invert to prevent leakage. If the container is leaking or material is applied for any reason or cause, carefully dam up spilled material to prevent runoff. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not walk through spilled material. Absorb spilled material with absorbing type compounds and dispose of as directed for pesticides below. In spill or leak incidents, keep unauthorized people away. You may contact Punjab Chemicals & Crop Protection, Ltd.

for decontamination procedures or any other assistance that may be necessary. The number is 1-480-502-9289.

Pesticide Disposal: Pesticide spray mixture or rinsate that can not be used or chemically reprocessed should be disposed of in a landfill approved for pesticides. Improper disposal of excess pesticide spray mixture or rinsate is a violation of Federal law. If these wastes can not be disposed of by the use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal: Non refillable container. Do not use or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container $\frac{1}{4}$ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank for later use or disposal. Drain for 10 seconds after flow begins to drip. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect the rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 psi for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Offer for recycling, if available. If not recycled, then puncture and dispose of in a sanitary landfill or incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

In EPA Letter Dated

5/24/2010

Under the Federal Insecticide,
Fungicide, and Rodenticide Act
as amended, for the pesticide
registered under EPA Reg. No.

82542-27

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION

Harmful if swallowed, inhaled or absorbed through skin. Avoid contact with skin, eyes, and clothing. Avoid breathing vapor or spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves, such as barrier laminate, or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or Viton
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls Statement: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in WPS.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground water.

under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground-water contamination.

Surface Water Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to runoff that contains this product. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall-runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) specified in the application directions for the treated crop.

PPE required for early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as barrier laminate or butyl rubber or nitrile rubber or neoprene rubber or polyvinyl chloride or viton
- Shoes plus socks

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Do not store this product near fertilizers, seeds or other pesticides. Store in original containers only. Store in a cool, dry, locked facility and avoid excess heat. Carefully open containers. Reclose all partially used containers by thoroughly tightening screw cap. Do not put concentrate or dilute material in food or drink containers. Keep containers closed when not in use.

In case of spill, confine spill by surrounding area with sand, cat litter or commercial clay and dispose as directed below.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container $\frac{1}{4}$ full of water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

GENERAL INFORMATION

Read the entire Directions for Use and Conditions of Sale before using this product.

Chemigation: Do not apply this product through any type of irrigation system.

For the most effective results, equipment calibration should be checked regularly. When using lower spray volumes, be sure to maintain uniform application and full crop coverage so as to ensure effective control. Increase spray volume to ensure proper application, if required.

NOTE: FOLLOW THESE DIRECTIONS WHEN MAKING APPLICATIONS NEAR AQUATIC AREAS (ESTUARIES, LAKES, MARSHES, NATURAL PONDS, PERMANENT STREAMS, RESERVIORS AND RIVERS).

See Aerial Drift Reduction Advisory Sections in following pages.

- Ground and aerial application with 100 feet of aquatic areas listed above is prohibited.
- Application to fields next to aquatic areas may only be made every other year.
- To prevent unwanted exposure to bodies of water maintain a 10 foot wide non-cultivated vegetative strip filter.
- See Spray Drift Management section for further information.

Mixing: Continuous agitation is required during mixing. When mixing this product and water, add the labeled amount of Tebuconazole 3.6F. Before combining any other substances with the mixture, ensure that the Tebuconazole 3.6F is completely dispersed in the mixture.

Compatibility Test for Mix Components:

Before mixing components, always perform a compatibility jar test. For 20 gallons per acre spray volume, use 3.3 cups (800 ml) of water in a clear, clean mixing jar. For other spray volumes adjust accordingly. Only use water from the intended source at the source temperature. Add components in the sequence indicated below in Mixing Order using 2 teaspoons for each pound of dry product or 1 teaspoon for each pint of liquid product of recommended label rate per acre. Always cap the jar and invert 10 cycles between component additions.

When the components have all been added to the jar and fully mixed, let the solution stand for 15 minutes. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface, nor fine particles that precipitate to the bottom, nor thick (clabbered) texture. If the spray solution is not compatible, repeat the compatibility test with the addition of a suitable compatibility agent and use the compatibility agent as directed on its label.

Mixing Order:

1. Water. Begin by agitating a thoroughly clean sprayer tank three-quarters full of clean water.
2. Agitation. Maintain constant agitation throughout mixing and application.
3. Inductor. If an inductor is used, rinse it thoroughly after each component has been added.
4. Products in PVA Bags. Place any product contained in water soluble PVA bags into the mixing tank. Wait until all water soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
5. Water Dispersible Products. Including dry flowables (DF), wettable powders (WP), suspension concentrates (SC) or suspo-emulsions (SE).
6. Water-soluble products.
7. Emulsifiable concentrates (such as oil concentrates when applicable).
8. Water soluble additives (such as AMS or UAN when applicable).
9. Remaining quantity of water.

Maintain constant agitation during application.

SPRAY DRIFT MANAGEMENT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, and relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Apply only as a medium or coarser spray (ASAE Standard 572) or a volume mean diameter of 300 microns or greater for spinning atomizer nozzles.

For aerial applications, the boom should be mounted on the aircraft so as to minimize

drift caused by wing tip vortices. The minimum practical boom length should be used, and must not exceed 75% of the wing span or rotor diameter.

Use the largest droplet size consistent with pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible and by avoiding excessive spray boom pressure. Apply in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment.

Spray should be released at the lowest possible height consistent with good pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided. When applications are made with a crosswind, the swath must be displaced downward. The applicator must compensate for this displacement at the up and downwind edge of the application area by adjusting the path of the aircraft upwind.

Make aerial or ground application when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.

Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperatures.

Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

ROTATIONAL CROPS:

Treated areas may be replanted with any crop specified on this label as soon as practical after last application. Any crop not specified on this label may be planted into treated areas 120 days after last application.

| Asparagus | Rust (<i>Puccinia</i> spp.) | 4 – 6 fl. Oz. | 14 days | 18 fl oz. | 100 days in California
180 days in all other states. |

Application Directions

Apply Tebuconazole 3.6F as a foliar spray to the developing ferns after harvest of spears

is completed. For optimum control apply at the earliest sign of rust pustules or when weather conditions are conducive for rust development. Under conditions of severe rust pressure, use the higher rate.

Apply in alternation with another effective fungicide. Tebuconazole 3.6F is a sterol demethylation inhibitor (DMI) fungicide (Group 3). Alternating Tebuconazole 3.6F with other DMI fungicides may lead to resistance.

Do not make more than 3 applications per season (18 fl. oz./acre or 0.51 lb. a.i./acre).

Do not apply to harvestable spears.

Tebuconazole 3.6F must have 2 hours of drying time on the plant foliage for the active ingredient to move systematically in to the plant tissue. After 2 hours the Tebuconazole 3.6F will be resistant to weathering.

Spray Volume:

Ground Application

Apply Tebuconazole 3.6F in no less than 10 gallons of spray solution per acre.

Aerial Application

Apply Tebuconazole 3.6F in no less than 5 gallons of spray solution per acre. A 50 foot spray drift buffer zone is required for all aerial applications.

Restricted-entry interval (REI) = 12 hours.

APPLICATION DIRECTIONS

*Rhizoctonia pod rot – North Carolina and Virginia only.

General Use Directions For Peanuts:

Ground Application:

Apply Tebuconazole 3.6F in no less than 10 gallons of spray solution per acre.

Aerial Application

Apply Tebuconazole 3.6F in no less than 5 gallons of spray solution per acre.

Traditional and university proven anti-disease techniques, such as specific crop rotation, along with industry approved best management practices, will contribute to optimum disease control when used with Tebuconazole 3.6F.

For optimum disease control, the lowest labeled rate of a spray surfactant may be tank mixed with Tebuconazole 3.6F.

Tebuconazole 3.6F will be less effective when the area to be treated is subject to drought. Product must be moved into the lower plant area and surrounding soil area by rain and

overhead irrigation. Moving the applied product down into the plant structure and surrounding soil is especially important in the control of root, stem and pod diseases.

Mode of Action Information

The active ingredient in tebuconazole 3.6F is a member of the DMI (Demethylation Inhibitor) fungicide group and FRAC grouping 3. Its mode of action inhibits synthesis of sterols. The triazole fungicide's actions are protective, curative (when applied early in the fungal pathogen's life cycle) and systemic in nature. The active ingredient is absorbed by root and leaf tissue, and then moves to the growing tissue. (Chlorothalonil is a Substituted Benzene fungicide that slows sporulation and growth rates of fungi and a member of FRAC group Y, Multi Site Action. Its action is protective and makes it a good resistance management partner).

Soilborne Disease Preventative Spray Program:

For best results in controlling White Mold and other Soilborne diseases (such as Sclerotium stem and pod rots or Rhizoctonia limb and pod rots), apply the above specified rate as part of a seven application spray program. Treatments should be initiated as preventative in nature. Chlorothalonil should be used in the beginning treatments (1st and 2nd) and those following four (4) consecutive Tebuconazole 3.6F applications (14 day scheduled) to lessen the risks of disease resistance. All treatments after mid August should be tank mixed with chlorothalonil.

Leaf Spot Resistance:

Care should be taken not to alternate or tank mix DMI fungicides in the same application. Non-DMI fungicides should be used in rotation or alternation with Tebuconazole 3.6F for disease resistance management. Contact your local extension peanut specialist or crop consultant about management programs proven for your area.

Animal Feed and Grazing Directions:

Following application of this product, do not permit animals to graze or forage in the treated areas. Hay and harvester thrashings from the treated area may not be used for animal feed. Restricted entry interval (REI) = 12 hours.

Do not add a surfactant to the spray solution when tank-mixing Tebuconazole 3.6F with Super-Tin. Apply Tebuconazole 3.6F in a spray volume of 15 gallons or more per acre by air or 50 gallons or more per acre by ground. Apply 7 to 8 fl. oz. per acre of Tebuconazole 3.6F to full-size mature trees and 4 to 6 fl. oz. per acre of Tebuconazole 3.6F to smaller trees. Apply the high rate to varieties that are highly susceptible to the indicated diseases, or when severe disease conditions exist. Do not cut cover crops in treated areas for feed or allow livestock to graze treated areas.

(<i>Cercospora brassicicola</i>) | 4 – 7.2 fl. Oz. | 12 – 14 days | 28.8 fl. Oz. | 7 days |

Application Directions

Apply specified dosage of Tebuconazole 3.6F in a protective spray schedule to foliage.

For optimum disease control, the lowest labeled rate of a spray surfactant may be tank mixed with Tebuconazole 3.6F.

Tebuconazole 3.6F must have 2 hours of drying time on plant foliage for the active ingredient to move systematically in to the plant tissue before rain or irrigation occurs. After 2 hours the Tebuconazole 3.6F will be resistant to weathering.

Restricted-entry interval (REI) = 12 hours.

Application Directions

For optimum control, wheat fields should be kept under observation for early disease symptoms. This is particularly important when conditions favoring disease development are favorable or when varieties susceptible to disease are planted.

For Rusts, apply the Tebuconazole 3.6F at the earliest sign of rust pustules on foliage.

For Fusarium head blight apply Tebuconazole 3.6F at the beginning of flowering on the main stem heads (Feekes 10.51) of the plants for optimum suppression.

For optimum disease control, the lowest labeled rate of a spray surfactant may be tank mixed with Tebuconazole 3.6F.

Tebuconazole 3.6F must have 2 hours of drying time on the plant foliage for the active ingredient to move systematically in to the plant tissue. After 2 hours the Tebuconazole 3.6F will be resistant to weathering.

Restricted-entry interval (REI) = 12 hours.

Spray Volume:

Ground Application

Apply Tebuconazole 3.6F in no less than 10 gallons of spray solution per acre.

Aerial Application

Apply Tebuconazole 3.6F in no less than 5 gallons of spray solution per acre.

Animal Feed and Grazing Directions:

Following application of this product, do not permit animals to graze or forage in the treated areas for at least 6 days. Straw may be used for feed or bedding.

Uniform applications of seed is necessary to ensure seed safety and best defense protection. Seed should be sound and well cured prior to treatment. Product should be diluted with sufficient water to ensure complete seed coverage. Consult a seed treatment specialist regarding slurry rates recommended for the crop to be treated with Tebuconazole 3.6F. The length of control will vary depending on the rate used. |

History: This message has been replied to.

Dear Ms. Keigwin,

Thank you for pointing out this unusual situation to us. My colleagues have chosen to remove both sources of technical material from the alternate CSFs and the Formulator's Exemption Statement. As you pointed out, the [REDACTED]

Confidential Statements of Formula may be entitled to confidential treatment

Since we believe there is some question as to whether this is acceptable, we wish to remove it as a potential source for the time being.

We hope that it will not be necessary to delay the PRIA date. The attached forms simply involve deletions of two sources of technical material from the Formulator's Exemption Statement of 5/19/2010 and the CSFs of 3/29/2010.

Regards.

Hi Mr. Hawk, Mr. Bastian and Mr. Stojic

I was taking one final pass through the file for this product and unfortunately there is a problem. Two of the sources listed on your CSFs [REDACTED]

127 - 130 Confidential Statements of Formula

If you look at your formulators exemption statement (which I can not attach here for CBI purposes, but was sent by Mr. Hawk on 5/19) the 3rd source listed [REDACTED]

I personally have not had this situation before, but I would think that you have 3 options. I will confirm this with Mary on Monday.

- 1) Withdraw the CSFs that utilize these products as technical sources
- 2) Remove the crops from the product label. I can send you a list of crops, but consider that you would be removing almost 2/3 of your label - your 4th source [REDACTED] on the most recently approved stamped label.
- 3) Submit a revised Alternate "C" formulation CSF deleting the 4th source (note that this would certainly mean the PRIA date would have to be extended). Also note that you would still need to remove [REDACTED] if you wish to keep Alternate formulation "B"

may be entitled to confidential treatment

Please let me know what you are initially thinking via e-mail. I leave for the day on Monday at 11:00 am, so if you can not reach me on Monday please

drop me another e-mail or call Mary (703) 308-9354.

Thanks,
Tracy

Dear Ms. Keigwin,

Please find attached an updated Formulator's Exemption Statement that reflects our revised CSFs of 3/29/2010. Also attached is an updated Data Matrix (including a redacted copy) that reflects new MRID numbers, the 3/10/2010 transfer of Punjab registrations and data to Repair and the 3/31/2010 Data Submitters List.

Please let me know if you require anything further. Is the PDF file adequate or shall I also submit the paper?

Regards.

ACTION REQUESTED: The Risk Manager requests: "This is a me-too for EPA File Symbol 82542-ET. They are claiming similarity to EPA Reg. No. 74280-2."

BACKGROUND: Source Dynamics LLC has applied for registration of Tebuconazole 3.6F Fungicide, EPA Reg. File Symbol 82542-ET, claiming similarity to Tebuconazole 3.6F Fungicide, EPA Reg. No. 74280-2. The active ingredient in both products is 38.7% tebuconazole. The Registrant is using the cite-all method of data support to satisfy the acute toxicity data requirements.

RECOMMENDATIONS:

1. TRB has evaluated the formulations of the proposed product, 82542-ET, and the cited product, 74280-2, and has determined that the two products are substantially similar.
2. A search of the OPP electronic databases shows that the cited product, 74280-2, was registered based on similarity to another product; therefore, no acute toxicity data were submitted and TRB is unable to generate an acute toxicity profile for 82542-ET.
3. Based on the label for 74280-2, the signal word for 82542-ET is "CAUTION." TRB recommends that the proposed product use the same precautionary labeling as the cited product.
4. This memorandum pertains only to the decision concerning whether the subject product is similar to the cited product from an acute toxicological view point. For the purposes of this action, TRB has made no further determination of the adequacy of the toxicological data base or the precautionary label of the cited product.
5. The proposed basic and alternate CSFs A, B and C dated December 28, 2010 should be approved by the TRB Product Chemistry Team.

INTRODUCTION:

The registrant has submitted a "Me-Too" application for the registration of a new end use product "Tebuconazole 3.6 Fungicide". The registrant has claimed that the proposed product is substantially similar to the registered product with Reg. No. 74280-2. The registrant has provided product chemistry data corresponding to 830 series group A with MRID No. 479461-01. The group B data was cited under self certification in compliance with PR Notice 98-1. The registrant has also submitted a CSF's for basic formulation and three alternate formulations A, B, and C (all dated 12-28-09) and the product label. During the review process, the registrant submitted the revised basic formulation CSF and three alternate CSF's A, B & C (all dated 03-29-10) on March 29, 2010. TRB has been asked to determine whether the product is substantially similar to the cited product and also determine whether the data submitted will support the registration application for the proposed product.

SUMMARY OF FINDINGS

1. The proposed end-use product contains Tebuconazole Technical Fungicide (Reg. No. [REDACTED] for basic); Reg. No. [REDACTED] (for alt A); Reg. No. [REDACTED] (for alt B) & Reg. No. [REDACTED] or [REDACTED] (both [REDACTED] for alt C)] as the active ingredient with product label claim nominal concentration of 38.70%.
2. The proposed revised CSF's for basic formulation & alternate formulations A, B, & C (all dated 03-20-10) are filled out completely and correctly. The nominal concentration of the active ingredient concurs with the product label claim nominal concentration (38.7%). The CSF's are in compliance with PR Notice 91-2. The CSF's for alternate formulations are in compliance with 40CFR§152.43. All the inert ingredients present in the formulations have been approved by the Agency (IIAB, 03-30-10) for the proposed uses. The standard certified limits have been proposed for the active ingredient and the inert ingredients which are in compliance with the standard certified limit table set forth in 40CFR§158.350(b)(2). The data submitted corresponding to guidelines 830.1550 (product identity & composition) and 830.1750 satisfy the product chemistry data requirements of 40CFR§158.320 and §158.350 respectively [MRID No. 479461-01].
3. The product chemistry data submitted corresponding to guidelines 830.1600 (description of material used to produce the product), 830.1650 (description of formulation process) and 830.1670 (discussion on the formation of impurity) satisfy the data requirements of 40CFR §158.325, §158.330, §158.335 and §158.340 respectively [MRID No. 479461-01].

DP BARCODE No.: D374097 **File Symbol No.:** 82542-ET **PRODUCT NAME:** Tebuconazole
3.6 Fungicide COMPANY: Source Dynamics LLC.

4. The product chemistry data cited corresponding to guideline 830.1800 (enforcement analytical method) satisfy the data requirements of 40CFR§158.355. The Tebuconazole 3.6 Fungicide samples were quantified for the active ingredient content employing reverse phase HPLC with UV detector (254 nm) and internal standardization. The method employed an Exsil 100 SAX (strong anion exchange) column with UV detector operating at 254 nm [cited MRID No. 470781-01].

5. The data cited corresponding to guidelines Series group B (physical-chemical properties) satisfy the data requirements of 40CFR§158.310(e), including the guidelines 830.6317 (storage stability) and 830.6320 (corrosion characteristics) [cited MRID No. 470781-01].

CONCLUSIONS:

The TRB has reviewed the product chemistry data submitted for the proposed end-use product and has concluded that:

1. The proposed revised CSF's for basic & alternate formulations A, B & C (all dated 03-29-10) are acceptable.
2. The data submitted corresponding to guidelines 830.1600 (description of materials used to produce the product), 830.1620 (description of production process), 830.1650 (description of formulation process), 830.1670 (discussion on the formation of impurity), and 830.1800 (cited enforcement analytical method) are acceptable.

Injection Volume: 10 microliter
Run Time: 10 min.

These instrumental parameters and operating conditions are used for the analysis of picloram and impurities in test samples for the subject product.

V. Preparation of Standards

An internal standard was not used.

Standard Solution

Weigh about 0.025 g Tebuconazole in reference standard and transfer into a 50 ml volumetric flask. Add 45 ml methanol (HPLC grade) to dissolve the material and make up the volume to 50 ml with additional amount of methanol (HPLC grade).

Now pipette out exactly 5 ml of this solution into another 50 ml volumetric flask. Add mobile phase to make up the volume to 50 ml. Shake well.

VI. Preparation of Test Sample

Weigh about 0.05 g test sample and transfer into a 50 ml volumetric flask. Add 45 ml methanol (HPLC grade) to dissolve the material and make up the volume to 50 ml with additional amount of methanol (HPLC grade).

Now pipette out exactly 5 ml of the above solution into another 50 ml volumetric flask. Add mobile phase to make up the volume to 50 ml. Shake well to mix the contents.

VII. Preparation of Quality Control Samples

Weigh Tebuconazole analytical grade material (50 mg) into a volumetric flask (50 ml). Add 45 ml methanol (HPLC grade) to dissolve the material and make up to 50 ml with additional amount of methanol (HPLC grade).

Validation

As routine analysis except 6 samples prepared for analysis.

DP BARCODE No.: D374097 File Symbol No.: 82542-ET PRODUCT NAME: Tebuconazole
3.6 Fungicide COMPANY: Source Dynamics LLC.

VIII. Analysis of Samples

Inject standard solution into HPLC column and make duplicate runs under the above-mentioned HPLC operating conditions. (See Section IV for experimental conditions.) The difference between the two runs (injections) should be below 0.5%. Likewise, inject the test sample solution.

Single injections are performed for all samples and the peak area for each injection recorded.

IX. Calculations

Integration, calibration and quantification are performed using Varian Star Chromatography Workstation software (Data Handling System).

Calculate the amount of the active ingredient using the following equation:

$$\text{Active Ingredient Content (\%w/w)} = (C/W) \times 100$$

Where C = Concentration from data analysis (mg.ml⁻¹)
and W = Concentration of sample (mg.ml⁻¹)

Footnotes

A. During the 21 day initial content review, all CSFs will be reviewed to determine whether all inerts listed, including fragrances, are approved for the proposed uses. If an unapproved inert is identified, the applicant must either 1) resolve the inert issue by, for example, removing the inert, substituting it with an approved inert, submitting documentation that EPA approved the inert for the proposed pesticidal uses, correcting mistakes on the CSF, etc. or 2) provide the data to support OPP approval of the inert or 3) withdraw the application. Removing or substituting an inert ingredient will require a new CSF and may require submission of data. All information, forms, data and documentation resolving the inert issue must have been received by the Agency or the application withdrawn within the 21 day period, otherwise, the Agency will reject the application as described below.

To successfully complete this aspect of the 21 day initial content screen, applicants are **strongly encouraged** to verify that all inert ingredients have been approved for the application's uses even if a product is **currently registered** by consulting the inert Web
